EMAIL: salesinfo@power-access.com

MODEL 2300DL PARTS LIST

STANDARD PARTS

MODEL 2300DL (MOTOR UNIT)
WITH SLIP FRICTION CLUTCH ARM,
ADJUSTABLE FOREARM AND SHOE, 9 FOOT 115VAC
POWER CORD, AND 300MHz RADIO RECEIVER

DOUGHNUT MAGNET (PART NUMBER 2440)
SEE PAGE 7, ITEM 4.1.5 AND PAGE 14

(6) #10 1-1/2" WOOD SCREWS
(4) – FOR ATTACHING MOTOR UNIT TO DOOR
(2) – FOR ATTACHING ARM SHOE TO JAMB

(4) BINDING BOLTS
FOR ATTACHING UNIT TO DOOR WITH THROUGH HOLES IN DOOR.
(THESE ARE USED IN PLACE OF THE WOOD SCREWS)

BLANK LATCH PLATE
USED IN PLACE OF ELECTRIC STRIKE

DOOR STOP
MOUNTED ON DOOR HINGE
SEE PAGE 5

MODEL 2300DL PARTS LIST

OPTIONAL ACCESSORIES

ELECTRIC STRIKE

MODEL 4560S – 24VDC ELECTRIC STRIKE

WIRELESS REMOTE TRANSMITTERS

**MODEL 4495SQ
WALL MOUNTED
4.5" SQUARE PUSH PLATE**

**MODEL 4437S
WIRELESS PROGRAMMABLE
KEYLESS ENTRY SYSTEM**

**GARAGE DOOR STYLE TRANSMITTER
MODEL 4440T – SINGLE CHANNEL
MODEL 4440D – TWO CHANNEL
MODEL 4440DD – FOUR CHANNEL**

**PENDANT STYLE
TRANSMITTER
MODEL 4440TK –
SINGLE CHANNEL**

1. PRECAUTIONS AND REQUIREMENTS

1.1 PRECAUTIONS:

- 1.1.1 VERIFY THAT YOU HAVE THE CORRECT MODEL NUMBER FOR YOUR APPLICATION. REFERENCE **MODEL CONFIGURATIONS** (PAGE 20) TO VERIFY YOU HAVE THE CORRECT UNIT. IF NOT, SEE **ROTATION DIRECTION (PAGE 15, 9.1)**.
- 1.1.2 THE DOOR THAT THE MODEL 2300DL IS TO BE MOUNTED TO SHOULD BE PLUMB, SQUARE, AND NOT WARPED. THE DOOR SHOULD NOT STICK TO THE JAMB.
- 1.1.3 THE DOOR THAT THE MODEL 2300DL UNIT IS TO BE MOUNTED TO SHOULD HAVE STANDARD BUTT HINGES, VOID OF ANY SPRINGS. NO OTHER DOOR OPEN OR CLOSE ASSIST FEATURES SHOULD BE ATTACHED TO THE DOOR. 20 LBS. OF INITIAL FORCE IS APPLIED AT THE LEADING EDGE OF THE DOOR TO BEGIN THE OPENING AND CLOSING ACTIONS. FLIMSY OR IMPROPERLY INSTALLED HINGES MAY PREVENT THE DOOR OPENER FROM OPERATING PROPERLY.

1.2 POWER REQUIREMENTS:

THIS MODEL IS SUPPLIED WITH A 9 FOOT POWER CORD THAT PLUGS INTO A 115V AC OUTLET. IT ALSO HAS 12 FEET OF LOW VOLTAGE WIRE TO ATTACH TO A 24V DC ELECTRIC STRIKE PLATE WHEN THE OPTIONAL STRIKE PLATE IS SUPPLIED.

WARNING: USE CAUTION AND DISCONNECT POWER WHEN WIRING ELECTRIC STRIKE.

1.3 CLEARANCE REQUIREMENTS:

AT LEAST 3" OF CLEARANCE ABOVE THE TOP OF THE DOOR IS NEEDED. AT LEAST 3-1/2" OF CLEARANCE IS NEEDED FROM THE HINGE SIDE SURFACE OF THE DOOR TO A PARALLEL OBJECT OR WALL TO ALLOW THE DOOR TO OPEN 90 DEGREES WITHOUT THE MOTOR MOUNT UNIT BEING OBSTRUCTED.

2. DOOR STOP

2.1 DOOR STOP INSTALLATION

A HARD DOOR STOP MUST BE USED TO PREVENT THE DOOR FROM TRAVELING PAST 90 DEGREES WHEN OPENING. A HINGE MOUNTED STANDARD DUTY DOOR STOP IS INCLUDED IN THE MODEL 2300DL PACKAGE. TO INSTALL THIS DOOR STOP REMOVE THE HINGE PIN FROM THE TOP DOOR HINGE. REINSERT THE PIN WITH THE DOOR STOP IN PLACE. ADJUST THE THREADED POST SO THE DOOR STOPS AT 90 DEGREES WHEN OPEN.

NOTE: A HEAVY DUTY DOOR STOP (NOT INCLUDED) IS RECOMMENDED FOR HEAVIER DOORS.

3. MOUNTING THE MOTOR UNIT AND LEVER ARM SHOE

3.1 MOUNTING THE MOTOR UNIT:

WARNING: WEAR SAFETY GOOGLES PRIOR TO DRILLING.

WITH THE WIDE EDGE OF THE MOTOR MOUNT PLATE FLUSH TO THE TOP OF THE DOOR AND 9 INCHES FROM THE EDGE OF THE DOOR, SECURE THE MOUNT PLATE WITH AT LEAST THE 4 SUPPLIED WOOD SCREWS OR BINDING POST SCREWS. ANY HOLES IN THE MOUNT PLATE MAY BE USED BUT IT IS ADVISED TO USE THE HOLES IN THE OUTERMOST ROWS TO FOLLOW BEST PRACTICE TECHNIQUE. SCREW INTO DOOR SURFACES THAT ARE FLUSH TO THE BACK SIDE OF THE MOTOR MOUNT PLATE. IT IS IMPORTANT THE SCREWS ACHIEVE A SOLID MOUNT.

3.2 MOUNTING THE SHOE:

FIRST, REMOVE THE SHOE FROM THE UPPER LEVER ARM. WITH THE CENTER LINE OF THE SHOE 1.75 INCHES ABOVE THE TOP OF THE NARROW EDGE OF THE MOTOR MOUNT PLATE AND 15.5 INCHES FROM THE HINGE SIDE EDGE OF THE DOOR, SECURE THE SHOE TO THE WALL WITH 2 SUPPLIED WOOD SCREWS. IF THERE IS A MOLDING ON THE WALL IT IS OK TO ATTACH THE SHOE BUT MAKE SURE THE SCREWS THAT HOLD THE SHOE ARE PROPERLY ANCHORED. IF NEED BE, USE LONGER SCREWS THAN THOSE SUPPLIED TO ENSURE PROPER ANCHORING. IT IS IMPORTANT THE SCREWS ACHIEVE A SOLID MOUNT.

4. LEVER ARM ADJUSTMENT

ADJUSTMENT ARM NUT

4.1 ATTACHING THE ADJUSTMENT ARM TO THE SHOE:

- 4.1.1 LOOSEN NUT ON ADJUSTMENT ARM
- 4.1.2 LOOSEN THE SET SCREWS IN THE CLUTCH ARM HUB
- 4.1.3 ADJUST LENGTH OF **ADJUSTMENT** ARM SO WHEN DOOR IS SHUT AND ARM IS ENGAGED IN SHOE, THE CLUTCH ARM MAKES A 90 DEGREE ANGLE TO WALL
- 4.1.4 BOLT THE ADJUSTMENT ARM IN THE CENTER HOLE OF THE SHOE BRACKET
- 4.1.5 TIGHTEN THE ADJUSTMENT ARM NUT AND THE SET SCREWS IN THE CLUTCH ARM HUB
- 4.1.6 VERIFY DOUGHNUT MAGNET IS MOUNTED TO THE SIDE OF **CLUTCH** ARM THAT FACES THE VELCROED SENSOR 1/8" FROM THE CLUTCH ARM HUB, CENTERED ON THE ARM. THIS TRIGGERS THE MOTOR TO SHUT OFF WHEN IN OPERATION.

CLUTCH ARM

5. ELECTRIC STRIKE INSTALLATION

5.1 STRIKE INSTALLATION

THE POWER ACCESS MODEL 2300DL DOOR OPENER IS DESIGNED SO THAT THE DOOR CAN STILL BE MAUALLY OPENED WITHOUT ACTIVATING THE UNIT. THEREFORE, IT IS NECESSARY TO HAVE ANOTHER MECHANICAL FEATURE TO HOLD THE DOOR SHUT WHEN NOT IN OPERATION.

5.1.1 BLANK STRIKE PLATE

IF NO MECHANICAL HOLD IS REQUIRED, THE SUPPLIED BLANK LATCH PLATE CAN BE INSTALLED IN PLACE OF THE EXISTING LATCH PLATE THAT IS CURRENTLY INSTALLED WITH THE DOOR HARDWARE.

NOTE: A CABINET STYLE MAGNET OR BALL DETENT (NOT SUPPLIED) MAY BE USED TO HOLD THE DOOR IN PLACE.

BLANK LATCH PLATE

5.1.2 ELECTRIC STRIKE

POWER ACCESS MODEL 2300DL IS DESIGNED TO WORK WITH 24VDC ELECTRIC STRIKES. IF AN ELECTRIC STRIKE IS SUPPLIED, FOLLOW THE INSTRUCTIONS INCLUDED IN THE PACKAGING FROM THE ELECTRIC STRIKE MANUFACTURER TO ASSEMBLE THE STRIKE AND INSTALL IT IN THE DOOR JAMB.

NOTE: BEFORE INSTALLATION MAKE SURE THE STRIKE IS SET TO YOUR DESIRED MODE – FAIL SAFE OR FAIL SECURE. FAIL SAFE MODE MEANS THAT IF THE STRIKE WERE TO FAIL, IT'S LATCH WILL SWING FREELY. IF IN FAIL SECURE MODE AND THE STRIKE WERE TO FAIL, THE LATCH WILL STAY LOCKED. THEREFORE A PERSON WOULD BE REQUIRED TO TURN THE DOOR KNOB TO OPEN THE DOOR. THE MODEL 4560S IS PROVIDED IN THE FAIL SECURE MODE, WHICH IS RECOMMENDED.

**ELECTRIC STRIKE DISASSEMBLED
MODEL 4560S – 24VDC SHOWN**

5. ELECTRIC STRIKE INSTALLATION

5.2 ELECTRIC STRIKE POSITIONING

WHEN INSTALLING THE ELECTRIC STRIKE, POSITION IT IN THE DOOR FRAME, FRONT TO BACK, SO THAT WHEN THE DOOR IS CLOSED THERE IS MINIMAL GAP BETWEEN THE STRIKE PLATE LATCHING SURFACE AND THE DOOR LATCH. WHEN CLOSED, THE DOOR SHOULD HAVE LITTLE TO NO WIGGLE ROOM.

5. ELECTRIC STRIKE INSTALLATION

5.3 CONNECTING ELECTRIC STRIKE TO MODEL 2300DL

ONCE INSTALLED AND POSITIONED, USE THE TWO 12 FOOT LOW VOLTAGE WIRES SUPPLIED WITH THE MOTOR UNIT TO CONNECT TO THE TERMINALS OF THE ELECTRIC STRIKE. WHEN THE DOOR OPENER IS ACTIVATED IT WILL SEND A SINGLE SHOT 24VDC PULSE TO THE STRIKE TO RELEASE TENSION AND ALLOW THE DOOR TO OPEN. ONCE CONNECTED, ROUTE THE WIRES IN THE DOOR JAMB SO THEY DO NOT OBSTRUCT ANY DOOR MOVEMENT.

NOTE: THE SUPPLIED STRIKE (MODEL 4560S) HAS UNIVERSAL POLARITY. IT DOES NOT MATTER WHICH WIRE IS CONNECTED TO WHICH TERMINAL.

TERMINALS FOR
STRIKE

MAIN CIRCUIT BOARD

6. PROGRAMMING THE RECEIVER

6.1 RECEIVER SWITCH SETTINGS:

YOUR REMOTE TRANSMITTER AND THE RECEIVER ON THE DOOR OPENER NEED TO HAVE MATCHING DIP SWITCH CONFIGURATIONS. FOLLOW THE INSTRUCTIONS PROVIDED WITH THE REMOTE TRANSMITTER TO PROPERLY SET THE SWITCHES. (SINGLE BUTTON REMOTE SHOWN HERE BUT SAME PROCESS HOLDS TRUE FOR ANY REMOTE TRANSMITTER.)

SWITCHES 1-10 ON THE MOTOR MOUNT RECEIVER NEED TO MATCH SWITCHES 1-10 ON THE TRANSMITTER.

NOTE: OPEN = OFF
SOME DIP SWITCHES ARE
LABELED ON-OFF AND SOME ARE
LABELED OPEN-CLOSE.
OPEN = OFF & CLOSED = ON

7. OPERATION

CAUTION: DO NOT ATTEMPT TO OPERATE OPENER UNTIL BOTH THE MOTOR UNIT AND LEVER ARM AND SHOE ARE SECURELY FASTENED TO THE DOOR AND JAMB. OPEN AND CLOSE THE DOOR MANUALLY A FEW TIMES TO ENSURE A FLUID MOTION OF THE LEVER ARM. THIS HELPS TO VERIFY THE MOUNTING LOCATIONS OF THE MOTOR UNIT AND SHOE.

7.1 OPERATION

7.1.1 PLUG THE MODEL 2300DL INTO 115V AC OUTLET.

7.1.2 ACTIVATE THE DOOR OPENER WITH A WIRELESS REMOTE TRANSMITTER. THE DOOR SHOULD OPEN SMOOTHLY TO 90 DEGREES, PAUSE, THEN CLOSE. TO ADJUST THE OPEN DWELL TIME AND/OR THE CLOSE ACTIVATION TIME REFER TO **ADJUSTMENTS** (PAGE 13).

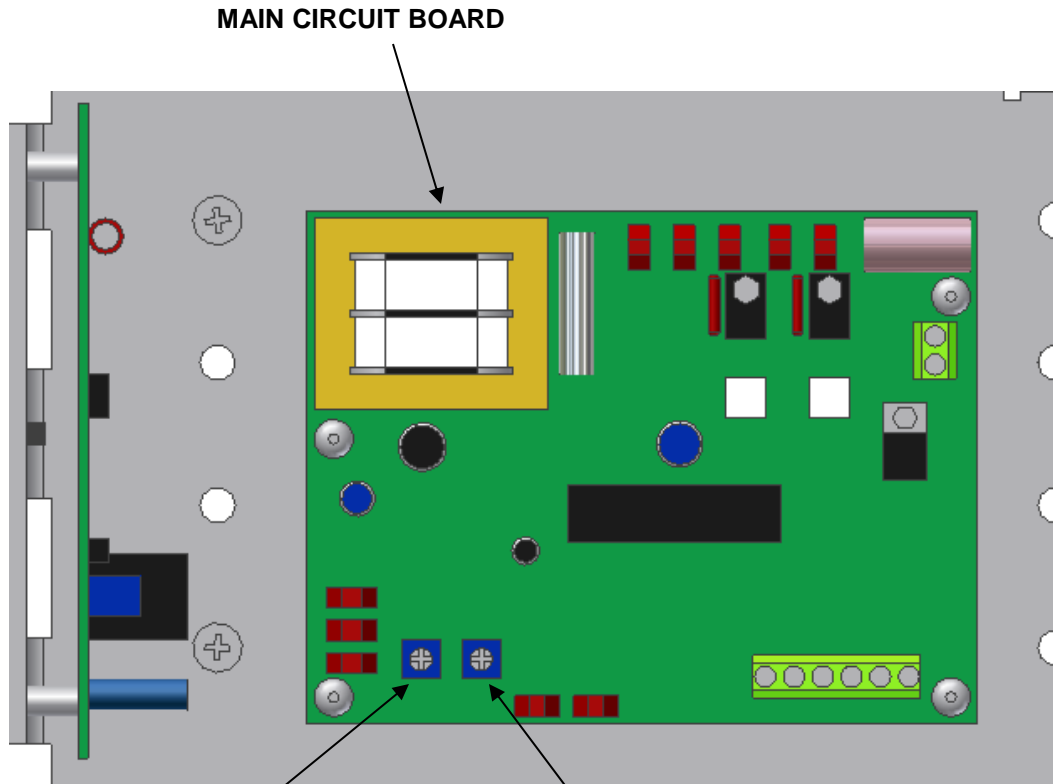

7.1.3 REFER TO **TROUBLESHOOTING** (PAGE 19) FOR ANY ISSUES YOU ARE ENCOUNTERING.

7.1.4 AFTER ADJUSTMENTS HAVE BEEN MADE, SECURE THE MOTOR COVER OVER THE UNIT AND ROUTE THE POWER CORD SO IT DOES NOT OBSTRUCT THE MOVEMENT OF THE DOOR. POWER CORD EXITS ON THE HINGE SIDE.

CAUTION: LEVER ARM SHOULD NEVER EXTEND BEYOND 90 DEGREES. BEYOND 90 DEGREE THE LEVER ARM WILL SCISSOR, CAUSING THE OPENER TO MALFUNCTION.

8. ADJUSTMENTS

**CLOSE
ADJ**

ROTATE CCW FOR
REDUCED MOTOR
ACTIVATION TIME

ROTATE CW FOR
INCREASED MOTOR
ACTIVATION TIME

**AUTO
CLOSE**

ROTATE CCW TO
DECREASE DWELL
TIME

ROTATE CW TO
INCREASE DWELL
TIME

NOTE: MAKE
ADJUSTMENTS BY
SMALL FRACTIONS
OF A TURN

8.1 OPEN DWELL TIME:

TO ADJUST HOW LONG THE DOOR STAYS OPEN BEFORE CLOSING, USE A SCREW DRIVER TO ADJUST "AUTO CLOSE" ON THE CONTROL BOARD. TURNING CLOCKWISE WILL INCREASE THE TIME THE DOOR STAYS OPEN. TURNING COUNTERCLOCKWISE WILL DECREASE THE DWELL TIME. THE DWELL TIME CAN BE ADJUSTED FROM 0-30 SECONDS.

8.3 CLOSING ACTIVATION TIME:

TO ADJUST HOW LONG THE MOTOR CONTINUES TO ROTATE WHEN CLOSING THE DOOR, USE A SCREWDRIVER TO ADJUST "CLOSE ADJ" ON THE CONTROL BOARD. IT IS RECOMMENDED THAT YOU ADJUST THIS TO HAVE THE MOTOR CONTINUE TO OPERATE FOR TWO SECONDS AFTER THE DOOR IS COMPLETELY CLOSED. THIS WILL ENSURE CONSISTENT REPEATABILITY. THE CLUTCH OF THE LEVER ARM ENSURES THAT EVEN IF THE DOOR IS SHUT OR ANY OBSTACLE IS ENCOUNTERED, THE MOTOR WILL NOT BURN ITSELF OUT. THE CLUTCH TENSION CANNOT BE ADJUSTED.

8. ADJUSTMENTS

VELCROED SENSOR

8.4 OPENING ANGLE:

THE DOUGHNUT MAGNET ON THE UNDERSIDE OF THE CLUTCH ARM ACTIVATES THE SENSOR VELCROED TO THE MOTOR. THE MOTOR IS TURNED OFF WHEN THE MAGNET PASSES THE SENSOR. THE DOUGHNUT MAGNET AND VELCROED SENSOR SHOULD BE POSITIONED SO THAT THE MOTOR SHUTS OFF WHEN THE DOOR IS 75-80 DEGREES OPEN AND THE DOOR WILL COAST TO A SOFT STOP AT ABOUT 90 DEGREES.

CAUTION: A DOOR STOP MUST BE USED TO PREVENT THE DOOR FROM TRAVELING BEYOND 90 DEGREES.

9. CHANGING HAND (ROTATION OF THE MOTOR)

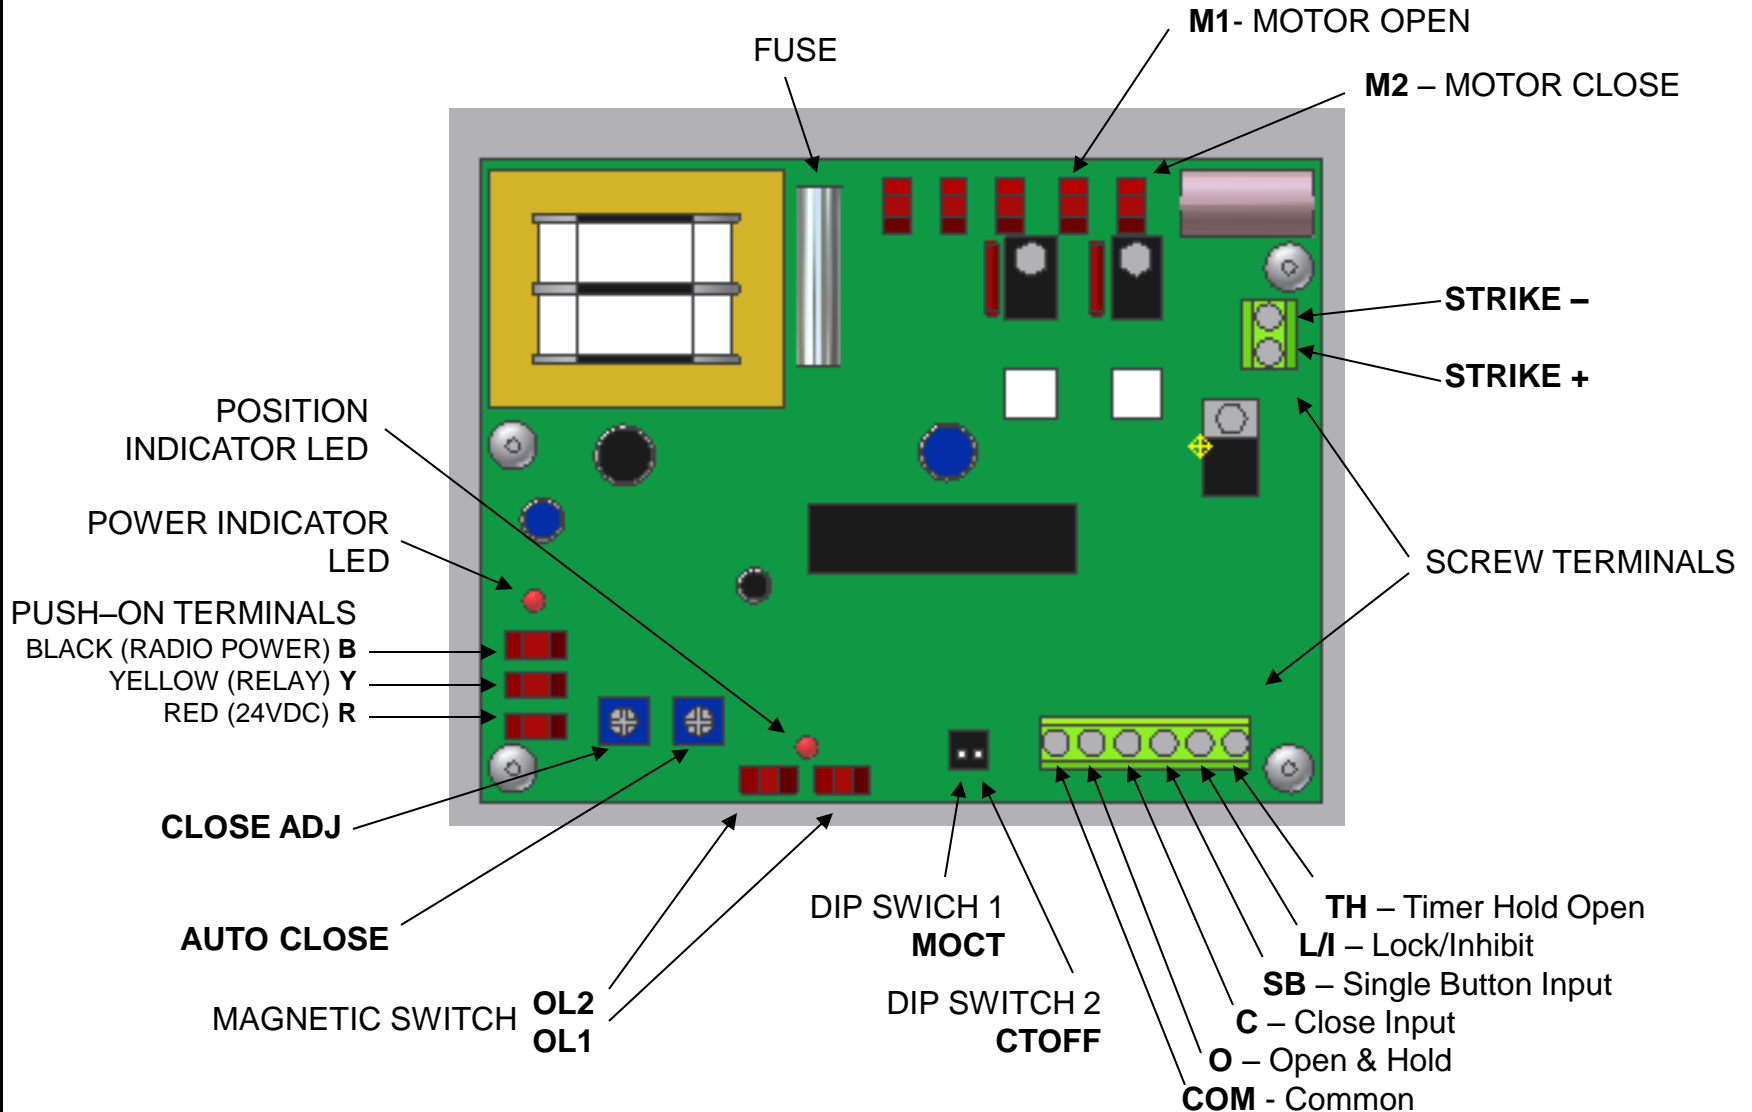

MAIN CIRCUIT BOARD

9.1 ROTATION DIRECTION:

THE MOTOR IN MODELS 2300DL AND 2300JR IS PROGRAMMED TO ROTATE CLOCKWISE TO OPEN THE DOOR. MODELS 2300DR AND 2300JL HAVE THE MOTOR TURN COUNTER-CLOCKWISE TO OPEN THE DOOR. IF YOU NEED TO CHANGE THE ROTATION OF THE MOTOR THEN THE POLARITY OF THE MOTOR NEEDS TO BE REVERSED. TO DO THIS, SWITCH THE TERMINALS THAT PLUG INTO **M1** AND **M2** ON THE CONTROL BOARD. MOUNT THE MOTOR UNIT ACCORDING TO THE INSTALLATION GUIDE FOR THE APPROPRIATE MODEL (SEE PAGE 20 FOR MODEL CONFIGURATIONS) AND REROUTE THE POWER CORD AS NECESSARY.

MAIN CIRCUIT BOARD FEATURE IDENTIFICATION

MAIN CIRCUIT BOARD
FEATURE DESCRIPTIONS

TERMINAL	FUNCTION	DESCRIPTION
COM	COMMON	INPUT WIRING "COMMON" CONNECTION
O	OPEN & HOLD	ON MOMENTARY SIGNAL IT WILL CAUSE AN OPENING, OR A STOP AND REVERSE IF CLOSING. <i>DOOR WILL TIMEOUT AND CLOSE IF DIP SWITCH 2 IS "OFF". IF ACTIVATED AND MAINTAINED, DOOR WILL STAY OPEN.</i>
C	CLOSE INPUT	N/A
SB	SINGLE BUTTON INPUT	DUPLICATES RADIO INPUT. THE FOLLOWING IS THE SAME FOR RADIO INPUT – A SIGNAL WILL ALWAYS CAUSE AN OPENING EXCEPT AT THE FULLY OPEN POSITION.
L/T	LOCK/INHIBIT	WHEN ACTIVATED THE DOOR WILL EMERGENCY STOP AND REMIAN STOPPED UNTIL SIGNAL IS REMOVED. IF THE DOOR IS AT REST, EITHER OPEN OR CLOSED, IT WILL NOT ACCEPT A SIGNAL AS LONG AS SL IS ACTIVATED. IF L/I IS ACTIVATED WHILE OPENING, THE DOOR WILL STOP. IF THE CLOSE TIMER (DIP SWITCH 2) IS "OFF", AND L/I IS RELEASED, THE TIMER WILL TIME OUT AND THE DOOR WILL CLOSE. IF L/I IS ACTIVATED DURING A CLOSING CYCLE, THE DOOR WILL STOP AND AWAIT ANOTHER SIGNAL. THIS WILL MEET THE CONDITIONS OF A SAFETY MAT CONDITION.
TH	TIMER HOLD OPEN	IF MAINTAINED IT WILL PREVENT AUTOMATIC CLOSE. IF THERE IS A MOMENTARY CONTACT IT WILL RESET THE CLOSE TIMER AND THE TIMER WILL BEGIN TIMING WHEN CONTACT IS RELEASED. THIS COULD BE USED WITH A SAFETY MAT APPLICATION WHERE THE ONLY CONCERN IS ON THE CLOSING CYCLE AS IT DOES NOT PREVENT AN OPENING.

**MAIN CIRCUIT BOARD
FEATURE DESCRIPTIONS**

TERMINAL	FUNCTION	DESCRIPTION
MOCT Dip Switch #1	MANUALLY OPEN CLOSE TIMER	WHEN SWITCH IS "ON" AND DOOR IS OPENED MANUALLY TO FULL OPEN, DOOR WILL TIME OUT AND MANUALLY CLOSE. WHEN SWITCH IS "OFF" AND THE DOOR IS OPENED TO FULL OPEN, IT WILL STAY OPEN UNTIL A NEW SIGNAL IS RECEIVED.
CTOFF Dip Switch #2	CLOSE TIMER OFF	WHEN SWITCH IS SET TO "ON" IT WILL INHIBIT THE CLOSE TIMER AND THE DOOR WILL REMAIN OPEN UNTIL A SIGNAL BUTTON, RADIO OR CLOSE INPUT IS RECEIVED.
CLOSE ADJ	ADJUST MOTOR ACTIVATION TIME WHEN CLOSING DOOR	TURN CLOCKWISE TO INCREASE TIME THAT THE MOTOR IS ACTIVATED WHEN CLOSING THE DOOR. TURN COUNTER-CLOCKWISE TO DECREASE TIME THAT THE MOTOR IS ACTIVATED WHEN CLOSING THE DOOR. <i>ONLY SMALL FRACTIONS OF A ROTATION ARE REQUIRED TO ADJUST THE TIME.</i>
AUTO CLOSE	ADJUST DWELL TIME OF DOOR IN OPEN POSITION	TURN CLOCKWISE TO INCREASE THE TIME THE DOOR REMAINS OPEN. TURN COUNTER CLOCKWISE TO DECREASE THE TIME THE DOOR REMAINS OPEN. <i>ONLY SMALL FRACTIONS OF A ROTATION ARE REQUIRED TO ADJUST THE TIME.</i>
POWER INDICATOR LED	INDICATES POWER ATTACHED	LED IS ON WHEN POWER IS ATTACHED TO UNIT. LED IS OFF WHEN NO POWER IS GOING TO THE UNIT.
POSITION INDICATOR LED	INDICATES LOCATION OF DOOR	LED REMAINS ON UNTIL THE MAGNETIC SWITCH IS ACTIVATED.

TROUBLESHOOTING

ISSUE	CAUSE	SOLUTION
DOOR DOES NOT OPEN	MOTOR ROTATION CONFIGURATION IS INCORRECT	REFER TO CHANGING HAND ON PAGE 15
	STRIKE PLATE DOES NOT ACTIVATE	VERIFY STRIKE IS INSTALLED CORRECTLY BY REFERRING TO MANUFACTURERS INSTRUCTIONS.
DOOR DOES NOT OPEN WIDE ENOUGH	IMPROPER LEVER ARM INSTALLATION	REFER TO LEVER ARM ADJUSTMENT ON PAGE 7
	IMPROPER PLACEMENT OF MAGNET/SENSOR	REFER TO LEVER ARM ADJUSTMENT (PAGE 7) AND OPENING ANGLE (PAGE 14)
DOOR DOES NOT STAY OPEN LONG ENOUGH	INCORRECT SETTING	REFER TO OPEN DWELL TIME (PAGE 13)
DOOR DOES NOT SHUT	INCORRECT SETTING FOR MOTOR ACTIVATION TIME	REFER TO CLOSING ACTIVATION TIME (PAGE 13)
	INCORRECT SETTING OF STRIKE	REFER TO ELECTRIC STRIKE INSTALLATION (PAGES 8 AND 9)
	OBSTRUCTION, WEATHER STRIPPING	PLUMB AND SQUARE THE DOOR. REPLACE WARPED DOOR. CLEAR DOOR JAMB OR DOOR STOP OBSTRUCTION. STIFF OR THICK WEATHER STRIPPING MAY NEED TO BE REMOVED.
	DIP SWITCH SETTINGS WRONG	ALIGN DIP SWITCH SETTINGS (PAGE 11)
DOOR DOES NOT LATCH / DOOR DOES NOT OPEN	STRIKE IMPROPERLY ASSEMBLED/ALIGNED	REFERENCE ELECTRIC STRIKE INSTALLATION (PAGES 8 AND 9)
STRIKE WORKS INTERMITTENTLY	BAD SOLENOID	REPLACE STRIKE
NOTHING HAPPENS WHEN TRANSMITTER BUTTON IS PRESSED	TRANSMITTER SWITCHES DO NOT MATCH RECEIVER	SEE PROGRAMMING THE RECEIVER (PAGE 11)
	CONTROLLER BATTERY DEAD	REPLACE BATTERY IN TRANSMITTER
	BLOWN FUSE	REPLACE FUSE
